Avient Specialty Inks Special Effects, Modifiers and Additives for Screen Printers

Avient special effect inks, ink modifiers and additives provide Avient plastisol screen printers with an extensive solution for embellishing prints. Curated from the most popular Avient screen printing ink plastisol effects and additives, the collection includes shimmers; glitters; texture bases;

soft bases; bright, clear inks and more. Printers familiar with Avient Specialty Inks brands will note the characteristic performance on press and on garments, as any inks are purposefully formulated and carefully tested.

SPECIAL EFFECT RANGE

Glitters, Shimmers and Metallic Liquid Inks

- **Glitter:** Glitters use big flake finish to create brilliantly dazzling prints. For added impact, tint the glitters or print over a plastisol color as a base.
- **Shimmer:** Shimmers use fine detail flakes with a light ink deposit feel to produce dramatic, unique effects while maintaining excellent durability. Customize shimmers by adding plastisol colorants.
- **Metallic Liquid Silver and Gold:** Liquid gold and silver effects use a very fine leafing flake to produce an opaque, wet metallic chrome or gilded look with a smooth, soft feel.

Hard Surface Textured Inks

- **Sculpture Base:** The sculpture base has a smooth finish that creates the effect of textured clay to produce high density, stacked effects.
- **Rock Base:** The rock base creates various special effects such as solid rock, coarse rope or hard textured surfaces to develop a tough and durable rock-hard ink surface.
- **Brittle Base:** The brittle base and white inks have the ability to fracture and crack easily when pressure is applied to the surface, exposing a worn, tough finish that resembles cracked paint.

Medium Surface Texture Inks

- **NuPuff Base:** This puff base is designed to produce raised texture effects with excellent durability and resistance to overblow.
- **Cork Base:** The cork base creates a high or low elevated texture that is smooth to the touch, but is extremely durable and stretchable.
- **HD Soft Base:** This high-density soft base products an elevated texture that has a soft and spongy feel with excellent durability.

Soft Surface Textured Inks

- **Natural Suede Base:** This base creates a suede/velvet finish, or can be colored to create leather and felt effects.
- **Plush Base:** The plush base is specially formulated to create soft fashion textures that simulate chenille, velvet, flock or suede.

Clear Inks

- **HD Clear 2:** This clear ink simulates glass, gel, water or high gloss surfaces and may be used as an adhesive carrier for foil, flock and other applications.
- **HD Sharp Clear:** This is a high density matte clear with sharp edges.
- **Special Effects Clear:** The special effects clear ink is used as an overprint glossy clear ink and is a great accent clear for water droplets. Mix this ink with glitters or yellow sparkle for a unique look.

Reflective & Luminescents

- **Phosphorescent:** Phosphorescent inks are glow-in-the-dark inks with a light green/yellow tint.
- **Imagebrite Reflective:** Inks that reflect with different tinting options for added color.
- **Luna Clear:** Print secret messages visible only under blacklight with Luna Clear ink.

Additives

- **Foil Resist Additive:**
This additive is added to plastisol inks to resist the adhesion of foil.

Adhesives

- **Flock Adhesive Base:** A base that is specially formulated to adhere flock fibers onto textile surfaces.
- **Particle Base:** This is a crystal-clear ink designed for use with poly-flake glitter and other particles.
- **Nova Base:** Nova base penetrates substrates, leaving the glitter flake exposed and dry for a dry glitter effect. Print this base over an ink underlay to produce gloss embossed effects.

SPECIALTY INK RANGE

Avient Specialty Inks special effects, modifiers and additives have also been tested and proven to work with any Avient plastisol screen printing ink brand. This gives printers expanded access to inspired inks designed to differentiate prints from the competition.
